

Dewa Athallah Putra Kamiko

Systems & Infrastructure Engineer

☎ +62 851-1130-0714 ✉ me@kamiko.dev 🔗 linkedin.com/in/kamiko0714 🌐 kamiko.dev

📍 Tangerang Regency, Banten, Indonesia

PROFILE

Systems & Infrastructure Engineer with a solid foundation in Linux Administration (Ubuntu/Debian) and Enterprise Networking (CCNA trained). Knowledgeable in the lifecycle of server environments, from managing Bare Metal hardware and VLAN configurations to assisting in the orchestration of Kubernetes clusters. Familiar with Alibaba Cloud infrastructure through formal training and experienced in automating tasks using Ansible and exploring GitOps workflows. Committed to learning and ensuring system reliability and security in both legacy and cloud-native environments.

EDUCATION

Institut Teknologi Indonesia

09/2021 – 09/2025

Bachelor of Computer Science | Computer Science

GPA: 3,56 / 4,00

PROFESSIONAL EXPERIENCE

PT. Tiga Daya Digital Indonesia - (Triputra Group) - Eksad Technology

11/2025 – Present

DevOps Trainee

- **Cluster Operations:** Assisted in managing Kubernetes-based server environments by maintaining YAML manifests and troubleshooting Kube Operator configurations to support stable Jenkins CI/CD pipelines.
- **Environment Synchronization:** Provisioned and synchronized Staging Environments by replicating Production namespaces, adjusting resource limits, and environment variables to achieve 100% configuration consistency.
- **Performance Tuning:** Learned to optimize hardware resource utilization by implementing Node Affinity, ensuring critical workloads are scheduled on specific physical nodes based on performance requirements.
- **Metrics & Log Management:** Implemented centralized monitoring and logging configurations using Prometheus/VictoriaMetrics and Grafana to track K3s cluster performance, generating structured uptime reports for senior engineering review.
- **SOP & Documentation:** Contributed to internal technical documentation for environment setup, ensuring team members can replicate stable configurations efficiently for ongoing projects.

Institut Teknologi Indonesia - Computer Science

07/2022 – 08/2025

Asisten Laboratorium

- **Network Operations:** Configured and managed network infrastructure, including VLAN tagging and port management using Cisco Catalyst Switches.

- **Systems Administration:** Supervised 26 workstations, performing OS installations and hardware troubleshooting via Bash scripting.
- **Technical Mentorship:** Led practicum sessions for 20+ students in Operating Systems (Linux Server) and Computer Network fundamentals.

SKILL

- **Operating Systems:** Linux (Ubuntu/Debian) Server Administration, Windows Server, Bash Scripting, Proxmox
- **Container & Orchestration:** Kubernetes (K3s/MicroK8s), Docker, FluxCD (GitOps Exploration), Helm.
- **Automation & IaC:** Ansible (Playbooks/Roles), Terraform (Basic), Jenkins CI/CD.
- **Networking & Security:** Cisco Networking (VLAN/Routing/Switching), CCNA Trained, Cloudflare Tunnels (Zero Trust).
- **Monitoring & Cloud:** VictoriaMetrics, Prometheus, Grafana, Alibaba Cloud (ACA Trained), GCP.

PROJECTS

Kamiko Hybrid-Cloud Homelab	03/2026 – Present
<i>Enterprise-Grade Infrastructure on Resource-Constrained Hardware</i>	
• Infrastructure: 3-Node Proxmox Cluster (pve-01, 02, 03) utilizing Full LXC Virtualization to maximize CPU/RAM density on Intel i3 hardware. • GitOps Workflow: Automated deployment and drift detection using FluxCD integrated with an internal Gitea repository. • Cloud-Native Stack: Orchestrated with K3s, utilizing VictoriaMetrics & Grafana for observability, and MariaDB for dedicated data persistence. • Zero-Trust Networking: Secured remote access via Cloudflare Tunnels, eliminating public port forwarding and reducing attack surface. • Troubleshooting Expertise: Successfully resolved LXC-specific Kubelet issues regarding AppArmor and /dev/kmsg passthrough for Ubuntu 24.04 nodes.	
Undergraduate Thesis (DevOps/Infrastructure Focus)	04/2025 – 10/2025
• Server Automation: Used Ansible to automate software deployment across legacy server nodes to ensure environment consistency. • Health Monitoring: Established a Prometheus & Grafana system to track hardware metrics during load stress tests.	
Voltnesia (IoT & Cloud Engineer Focus)	10/2024 – 01/2025
• Architected a real-time data pipeline to sync power metrics from ESP32 hardware to a Flutter dashboard via GCP. • Developed cloud middleware using TypeScript for efficient data processing and business logic management. • Engineered a hybrid storage system (Firestore & SQLite) to ensure data availability • Implemented a reactive hardware-to-mobile bridge, delivering near-instant updates for voltage, current, and wattage metrics.	

COURSES

Alibaba Cloud Associate Cloud Computing Certification	05/2025 – 05/2027
Learning the fundamentals of cloud computing through Alibaba Cloud services such as ECS, SLB, VPC, and related components	
CCNA: Introduction to Networks	10/2024 – Present
<i>Digitalent Komdigi</i> Pelatihan CCNA Network Engineer Fresh Graduate Academy Digital Talent Scholarship 2024	

AWARDS

Indobot	22/12/2024
<i>PT Ozami Inti Sinergi</i> Top 8 Best IoT Projects in the Certified Independent Study Program "Indobot Academy - Internet of Things (IoT) Engineer Camp" with the project title "VOLTNESIA: IoT-Based Single-Phase Electricity Monitoring and Control System"	
Certificate of Achievement	19/01/2024
<i>Bangkit Studi Independent</i> Top 10 Teams at Bangkit Capstone with project catatmak
